SECTION 8: Exposure controls/personal protection

Microfiber Cleaner and Laundry Booster

8.1 - Control parameters

- The SWA TWA exposure value is the average airborne concentration of a particular substance when calculated over a normal 8 hour working day for a 5 day working week. The STEL (Short Term Exposure Limit) is an exposure value that may be equalled (but should not be exceeded) for no longer than 15 minutes and should not be repeated more than 4 times per day. There should be at least 60 minutes between successive exposures at the STEL. The term "peak" is used when the TWA limit, because of the rapid action of the substance, should never be exceeded, even briefly.

8.2 - Exposure controls

Appropriate engineering controls

- No special equipment is usually needed when occasionally handling small quantities. The following instructions are for bulk handling or where regular exposure in an occupational setting occurs without proper containment systems.

Individual protection measures, such as personal protective equipment

- Dust protection safety glasses.

- Wear protective gloves.
